**Corporate Environmental Strategies and Value Creation** Dec 19 2022 The rise of sustainability has swept away the traditional views about firms' competitiveness, survival and profitability, advocating new approaches. Although the strategic decisions on sustainable issues become more important, many firms have erroneously narrow view of environmental strategies and related practices generally have only an outward-looking focus. In line with these considerations, this book aims to investigate the "environmental dimension" as a new "strategic variable" for contributing to strengthen the competitive positioning of firms and to increase the value creation process. The author provides a comprehensive framework for green management by highlights practices and tools to translate strategy into effective environmental ideas. The focus is on goals and actions, from a side, and on the implementation of appropriate control systems useful for monitoring the results of environmental performance, on the other. As such, the book enriches sustainability literature, offers new insights for scholars, and provides implications for practitioners involved in green management.

**Encyclopedia of Africa South of the Sahara** Jul 14 2022 Arranged alphabetically. In addition to biographies, extensive country information (primarily postindependence), and historical events, the encyclopedia treats general topics in articles such as agriculture, political systems, and religion and ritual.

**Data Mining** Oct 25 2020 Data Mining introduces in clear and simple ways how to use existing data mining methods to obtain effective solutions for a variety of management and engineering design problems. Data Mining is organised into two parts: the first provides a focused introduction to data mining and the second goes into greater depth on subjects such as customer analysis. It covers almost all managerial activities of a company, including: • supply chain design, • product development, • manufacturing system design, • product quality control, and • preservation of privacy. Incorporating recent developments of data mining that have made it possible to deal with management and engineering design problems with greater efficiency and efficacy, Data Mining presents a number of state-of-the-art topics. It will be an informative source of information for researchers, but will also be a useful reference work for industrial and managerial practitioners.

**Next-Generation Applied Intelligence** Mar 18 2020 The International Conference on Industrial, Engineering and Other Applications of Applied Intelligent Systems (IEA/AIE), always sponsored by the International Society of Applied Intelligence (ISAI), emphasizes applications of applied intelligent systems to solve real-life problems in all areas. It is held every year and has become one of the biggest and most important academic activities concerning the theory and applications of intelligent systems in the world. The IEA/AIE 2009 conference was hosted by the National University of Tainan and National University of Kaohsiung in Taiwan. This was the first time that the IEA/AIE conference was held in Taiwan. We received 286 papers from all parts of the world. Only 84 papers were selected for publication in this volume of LNAI proceedings. Each paper was reviewed by at least two anonymous referees to assure the high quality. We would like to express our sincere thanks to the Program Committee members and all the reviewers for their hard work, which helped us to select the highest quality papers for the conference. These papers highlight opportunities and challenges for the next generation of applied intelligence and reveal technological innovations in real applications.

**Cellular Manufacturing** Feb 21 2023 In today's business world, competitiveness defines the industrial leading edge. Organizations and businesses of all sizes are adopting Lean manufacturing practices to increase efficiency and address worries about their bottom lines. In a detailed review of this staple of Lean manufacturing, Cellular Manufacturing: Mitigating Risk and Uncertainty outlines how cellular manufacturing can do just that. It demonstrates how this approach can help you and your teams build a variety of products with as little waste as possible. The book begins by presenting a survey of the current state of existing methods that can best be used in the handling of the bottleneck machines and parts problem, which results from the cellular manufacturing system design. It then explores how decision making under risk is used to help the designer select the best cell arrangement in case of probabilistic production volume and maximize the profit imposed by resource capacity constraints. The author then presents a method for the system design of a manufacturing cell that aims for profit maximization over a certain period of time. He also discusses robust design, illustrated with a real application. Put simply, cellular manufacturing integrates machinery and a small

team of staff, directed by a team leader, so all the work on a product or part can be accomplished in the same cell eliminating resources that do not add value to the product. A concise yet unique reference, this book incorporates decision making under risk into cellular manufacturing. The text makes the link that ties cellular manufacturing to the bottom line. It helps you recognize savings opportunities from elimination of downtime between operations, decreased material handling costs, decreased work-in-progress inventory and associated costs, reduced opportunity for handling errors, decreased downtime spent waiting for supplies or materials, and reduced losses from defective or obsolete products.

**Radioactive Waste Management** Mar 10 2022

*Combination Vaccines* Apr 30 2021 A diverse team of leading experts comprehensively review the complex biology of a wide variety of vaccine combinations, as well as the technical, clinical, and regulatory aspects of their development. Topics covered range from the use of immunological correlates of efficacy, rather than efficacy per se, for the evaluation and licensure of vaccine combinations, to preserving a stable immunogenic mixture in appropriate containers according to accepted regulatory standards. Discussed in detail are the trivalent influenza vaccine, the pneumococcal polysaccharide vaccine, the MMR vaccine, the DTP vaccine and its combinations, and the quadrivalent rotavirus vaccine, all of which serve as models for the development of future combinations. *Combination Vaccines: Development, Clinical Research, and Approval* illuminates all the scientific, clinical, regulatory, and health care issues involved in the research, development, and human use of combination vaccines.

**Moving & Relocation Sourcebook and Directory, 1998** Aug 15 2022 New edition that adds extensive city-specific contact information and on-line resources to a guide to 100 major US cities. Each entry includes a narrative and supplemental tables covering location, climate and weather, history, economy, and attractions. Contains a multitude of relevant data such as demographics, economic and quality of living indicators, education, entertainment and sports, history, major employers, important phone numbers, and local government offices. A special section addresses where to get help for moving. Annotation copyrighted by Book News, Inc., Portland, OR

*Reorganizing the Factory* Oct 05 2021 Winner of the 2003 Shingo Prize! Reorganizing work processes into cells has helped many organizations streamline operations, shorten lead times, increase quality, and lower costs. Cellular manufacturing is a powerful concept that is simple to understand; however, its ultimate success depends on deciding where cells fit into your organization, and then applying the know-how to design, implement and operate them. *Reorganizing the Factory* presents a thoroughly researched and comprehensive "life cycle" approach to competing through cellular work organizations. It takes you from the basic cell concept and its benefits through the process of justifying, designing, implementing, operating, and improving this new type of work organization in offices and on the factory floor. The book discusses many important technical dimensions, such as factory analysis, cell design, planning and control systems, and principles for lead time and inventory reduction. However, unique to the literature, it also covers in depth the numerous managerial issues that accompany organizing work into cells. In most implementations, performance measurement, compensation, education and training, employee involvement, and change management are critically important. These issues are often overlooked in the planning process, yet they can occupy more of the implementation time than do the technical aspects of cells. Includes: Why do cells improve lead time, quality, and cost? Planning for cell implementation Justifying the move to cells, strategically and economically Designing efficient manufacturing and office cells Selecting and training cell employees Compensation system for cell employees Performance and cost measurement Planning and control of materials and capacity Managing the change to cells Problems in designing, implementing, and operating cells Improving and adapting existing cells Structured frameworks and checklists to help analysis and decision-making Numerous examples of cells in various industries

**Introduction to Manufacturing Systems** Feb 09 2022 *Introduction to Manufacturing Systems* is written for all college- and university-level manufacturing, industrial technology, engineering technology, industrial design, engineering, business management and other related disciplines where there is an interest in learning about manufacturing systems as a complete system. Even lay people will find this book useful in their quest to learn more about the field. Its simple and easy-to-understand language makes it particularly useful to all readers. The field of manufacturing is a world of its own which bears on almost all other disciplines. This book is not necessarily a "how to" material that teaches one how to manufacture a product, but rather an aid to help learners gain a more complete understanding of "what is in it" and "what happens in the field". Thus, this book will provide more comprehensive information about manufacturing. It is intended to introduce every interested person to what manufacturing is, its diverse components, and the various activities and tasks that are undertaken in its many and diverse departments. It should serve as an introductory material to beginning college manufacturing and related majors. Over the years, I have learned that most of these beginners are ill equipped with key aspects of manufacturing when they arrive. This group also includes all technical- and business-minded individuals who enroll or train in trade, business, engineering, vocational and technical programs and institutions. This book is divided into 12 very distinctive chapters that are closely arranged to follow manufacturing activities as sequentially as possible, to help readers follow a rather continuous thread of activities generally undertaken in the industry. Its chapters cover various topics including different types, techniques or methods, and philosophies of manufacturing; manufacturing plants and facilities; manufacturing machines; tools and production tooling; manufacturing processes; manufacturing materials and material handling systems; measurement instruments; manufacturing personnel; manufactured products; and planning, implementing, controlling and improving manufacturing systems.

*Handbook on the Sustainable Supply Chain* Jan 20 2023 Supply chain management has long been a feature of industry and commerce but, with increasing demands from consumers, producers are spending more time and money investing in ways to make supply chains more sustainable. This exemplary Handbook provides readers with a comprehensive overview of current research on sustainable supply chain management.

**WALNECK'S CLASSIC CYCLE TRADER** Jan 28 2021

*Integrated Reconfigurable Manufacturing Systems and Smart Value Chain* Jan 08 2022 The book develops manufacturing concepts and applications beyond physical production and towards a wider manufacturing value chain incorporating external stakeholders that include suppliers of raw materials and parts, customers, collaborating manufacturing companies, manufacturing service providers, and environmental organisations. The focal point of the value chain remains as a manufacturing system and its operations while flows of parts/materials and information and services across the supply/value chain tiers are taken into account. The book

emphasises on the two innovative paradigms of Reconfigurable Manufacturing Systems (RMS) and the 4th industrial revolution (Industry 4.0) along with their incorporated development. RMS, as a relatively new paradigm, has been introduced to meet the requirements of 'the factories of the future', which is aimed by Industry 4.0, though introducing greater responsiveness and customised flexibility into production systems, in which changes in product volumes and types occur regularly. Manufacturing responsiveness can be achieved by RMS through reconfiguring the production facilities according to changing demands of products and new market conditions. The book addresses challenges of mass-customisation and dynamic changes in the supply-chain environment by focusing on developing new techniques related to integrability, scalability and re-configurability at a system level and manufacturing readiness in terms of financial and technical feasibility of RMS. It demonstrate the expected impacts of an RMS design on operational performance and its supply/value chain in the current/future manufacturing environment facing dynamic changes in the internal/external circumstances. In order to establish a circular economy through the RMS value chain, an integrated data-based reconfiguration link is introduced to incorporate information sharing amongst the value chain stakeholders and facilitate grouping products into families with allocation of the product families to the corresponding system configurations with optimal product-process allocation. Decision support systems such as multi criteria decision making tools are developed and applied for the selection of product families and optimising product-process configuration. The proposed models are illustrated through real case studies in applicable manufacturing firms.

**The Cumulative Book Index** Nov 13 2019 A world list of books in the English language.

*China Markets Yearbook 1999 Sep 04 2021* The basic reference for all who do business in China. The data, provided in an exclusive contract by the PRC State Statistics Bureau, is further tested and refined under the editors' supervision down to a less than 0.1% error rate. The book focuses on manufacturing and consumer markets. It includes the latest and most comprehensive market data and firm-level information available. Coverage includes the entire industrial and consumer goods sector (563 industries) of the Chinese economy -- more than 500,000 firms, including foreign-owned operations, state enterprises, town and village enterprises, and different types of joint ventures. For each industry there are data on past sales, production volume, productivity, number of employees, firm size, and key distributor.

*Modern Records, Maverick Methods Oct 17 2022* From the Fairlight CMI through MIDI to the digital audio workstations at the turn of the millennium, Modern Records, Maverick Methods examines a critical period in commercial popular music record production: the transformative digital age from the late 1970s until 2000. Drawing on a discography of more than 300 recordings across pop, rock, hip hop, dance and alternative musics from artists such as the Beastie Boys, Madonna, U2 and Fatboy Slim, and extensive and exclusive ethnographic work with many world-renowned recordists, Modern Records presents a fresh and insightful new perspective on one of the most significant eras in commercial music record production. The book traces the development of significant music technologies through the 1980s and 1990s, revealing how changing attitudes and innovative techniques of recording personnel reimagined recording processes and, finally, exemplifies the impact of these technologies and techniques via six comprehensive tech-processual analyses. This meticulously researched and timely book reveals the complexity of recordists' responses to a technological landscape in flux.
