**Spin Current** Feb 10 2022 In a new branch of physics and technology, called spin-electronics or spintronics, the flow of electrical charge (usual current) as well as the flow of electron spin, the so-called "spin current", are manipulated and controlled together. This book is intended to provide an introduction and guide to the new physics and applications of spin current.

Massage Online (MO) for Mosby's Pathology for Massage Therapists (User Guide and Access Code) Nov 26 2020 Reinforce your understanding of pathology with hands-on exercises! Based on Mosby's Pathology for Massage Therapists, 2nd Edition, this online course supplements the textbook with fun, engaging, interactive modules. It brings science concepts to life with more than 200 exercises, over 1,000 high-quality images, and dynamic videos and animations. Modules correspond to the chapters in the text, and include reading assignments. To make it easier to remember contraindications for massage therapy, colorful traffic light icons accompany each pathology. Together with the textbook, Massage Online offers the best possible preparation in pathology for massage therapy. A contemporary design includes easy, intuitive navigation and enhances readability. A traffic light icon appears next to each pathology, indicating whether it is safe to proceed with massage (green), there are cautions (yellow), or the massage is contraindicated (red). Objective-based learning helps you make the most of your time with objectives for study at the beginning of each module and an exam at the end, with rationales for each answer. Interactive activities reinforce your understanding with about 10 activities in each module including labeling, drag-and-drop, matching exercises, bin-drops (putting the correct descriptor in the proper columns), and multiple-choice and quiz show formats for reviews. Interactive features include pop-ups with content on: Points of interest Historical marker Clinical tip Spotlight on research Rest area asking you to take a break or offering a tip for meditation or relaxation Animations depict pathology concepts that are difficult to represent photographically, like cell division. High-quality images illustrate anatomy and key concepts, and may be enlarged in a pop-up view. Case studies offer realistic, multi-faceted, client scenarios so you can synthesize and apply what you have learned. Picture galleries show the components of a disease/condition, to help you select, modify, or avoid massage procedures. For example, the osteoporosis picture gallery includes drawings of posture, a bone density test being performed, photos and radiographs of vertebrae with tissue loss, normal bones in comparison to osteoporotic bones, and photos of the

progression of the disease through the life cycle. Understanding Medical Technology screens explain today's technology, such as the pacemaker and its implications for performing massage. Did You Catch That? ensures that you fully comprehend all key information. User-friendly design and navigation make it easy to access the module outline, glossary, and forms, and also gauge your progress through the module. Automatic scoring for module exams includes automatic reporting to the instructor's grade book. Audio glossary allows you to roll over terms to see pop-ups with definitions and pronunciations.

**The Safety and Efficacy of Noninvasive Brain Stimulation in Development and Neurodevelopmental**

**Disorders** Mar 11 2022 Noninvasive brain stimulation (including Transcranial Magnetic Stimulation (TMS) and Transcranial Current Brain Stimulation (TCS)) can be used both experimentally and therapeutically. In the experimental domain TMS can be applied in single pulses to depolarize a small population of neurons in a targeted brain region. This protocol can be used, for example, to map cortical motor outputs, study central motor conduction time, or evaluate the cortical silent period (a measure of intracortical inhibition) all of which are relevant to neurodevelopment. TMS can also be applied in pairs of pulses (paired pulse stimulation, ppTMS) where two pulses are presented in rapid succession to study intracortical inhibition and facilitation. Trains of repeated TMS (rTMS) pulses can be applied at various stimulation frequencies and patterns to modulate local cortical excitability beyond the duration of the stimulation itself. Depending on the parameters of stimulation the excitability can be either facilitated or suppressed. TCS (including Transcranial Direct Current Stimulation (tDCS), alternating current

(tACS), and random noise current stimulation (tRNS) also have the potential to modulate cortical excitability and have also been used to study and modulate cortical activity in healthy and patient populations. The after-effects of rTMS and TCS are thought to be related to changes in efficacy (in either the positive or negative direction) of synaptic connections of the neurons being stimulated, thus these techniques have been used to study and modulate cortical plasticity mechanisms in a number of populations. Recently, researchers have begun to apply these techniques to the study of neurodevelopmental mechanisms as well as the pathophysiology and development of novel treatments for neurodevelopmental disorders. Though there is much promise, caution is warranted given the vulnerability of pediatric and clinical populations and the potential that these techniques have to modify circuit development in a cortex that is in a very dynamic state. This Research Topic hopes to provide an opportunity to share ideas across areas (human and animal researchers, clinicians and basic scientists). We are particularly interested in papers that address issues of choosing a protocol (intensity, frequency, location, coil geometry etc.), populations where noninvasive brain stimulation may have direct impact on diagnostics and treatment, as well as the safety and ethics of applying these techniques in pediatric populations. As many may not be aware of the potential and limitations of noninvasive brain stimulation and its use for research and treatment in this area, this Research Topic promises to have broad appeal. Submissions for all Frontiers article types are encouraged.

**Role-Playing Game Studies** Aug 24 2020 This handbook collects, for the first time, the state of research on role-playing games (RPGs) across disciplines, cultures, and media in a single, accessible volume. Collaboratively

authored by more than 50 key scholars, it traces the history of RPGs, from wargaming precursors to tabletop RPGs like Dungeons & Dragons to the rise of live action role-play and contemporary computer RPG and massively multiplayer online RPG franchises, like Fallout and World of Warcraft. Individual chapters survey the perspectives, concepts, and findings on RPGs from key disciplines, like performance studies, sociology, psychology, education, economics, game design, literary studies, and more. Other chapters integrate insights from RPG studies around broadly significant topics, like transmedia worldbuilding, immersion, transgressive play, or player–character relations. Each chapter includes definitions of key terms and recommended readings to help fans, students, and scholars new to RPG studies find their way into this new interdisciplinary field.

Use of Services for Family Planning and Infertility, United States, 1982 Dec 08 2021 The 1982 statistics on the use of family planning and infertility services presented in this report are preliminary results from Cycle III of the

National Survey of Family Growth (NSFG), conducted by the National Center for Health Statistics. Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15-44. A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received. Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date. Overall, 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years. There were no statistically significant differences between white (79%), black (75%) or Hispanic (77%) wives, or between the 2 income groups. The 1982 survey questions were more comprehensive than those of earlier cycles of the survey. The annual rate of visits for family planning services in 1982 was 1077 visits /1000 women. Teenagers had the highest annual visit rate (1581/1000) of any age group for all sources of family planning services combined. Visit rates declined sharply with age from 1447 at ages 15-24 to 479 at ages 35-44. Similar declines with age also were found in the visit rates for white and black women separately. Nevertheless, the annual visit rate for black women (1334/1000) was significantly higher than that for white women (1033). The highest overall visit rate was for black women 15-19 years of age (1867/1000). Nearly 2/3 of all family planning visits were to private medical sources. Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources, as did black women age 15-24. White women age 20 and older had higher visit rates to private medical services than to clinics. Never married women had higher visit rates to clinics than currently or formerly married women. Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term. About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview. During the 3 years before interview, about 1.9 million women had infertility visits. For all ever married women, as well as for white and black women separately, infertility services were more likely to be secured from private medical sources than from clinics. The survey design, reliability of the estimates and the terms used are explained in the technical notes.

*Military Strategy and Tactics* May 13 2022 This volume brings forth a set of selected papers from the Conference on Modeling Land Battle Systems for Military Planning. Sponsored by the Special Programme Panel on Systems Science of the NATO Science Committee, the conference took place in Ottobrunn, Germany, at the War Gaming Centre of Industrieanlagen-Betriebsgesellschaft. The idea to organize a conference on land battle system models was first suggested to me in 1972 by Andreas Mortensen, then a member of the Norwegian Defence Research Establishment and presently at the SHAPE Technical Centre, when we discussed the apparent inconsistencies of various evaluations of force capability within NATO. Frequently, decision makers are confronted by contradictory results of different studies addressing essentially the same problem leaving them with the impression that the tools of systems analysis and operations research may not be very objective guides. However, experienced systems researchers know that a detailed comparison of models, their assumptions and inputs, would generally show that results are not really contradictory. But not only seem the decision processes in large national and international organizations to be such that a comparison can hardly ever be accomplished, also the documentation available is rarely sufficient to really comprehend the differences in results. For these reasons, we felt that an effort to review the state of the art of modeling in support of force capability assessments was overdue.

*Oceanic Anglerfishes* Dec 16 2019 No environment on Earth imposes greater physical and biological constraints on life than the deep oceanic midwaters. Near-freezing temperatures, the absence of sunlight, enormous pressure, and a low food supply make habitation by any living thing almost inconceivable. Yet 160 species of anglerfishes are found there in surprising profusion. Monstrous in appearance, anglerfishes possess a host of unique and spectacular morphological, behavioral, and physiological innovations. In this fully illustrated book, the first to focus on these intriguing fish, Theodore W. Pietsch delivers a comprehensive summary of all that is known about anglerfishes—morphology, diversity, evolution, geographic distribution, bioluminescence, and reproduction.
