Proceedings of the 1997 Symposium on Intellectual Property Law, University of Washington, Seattle, sponsored by CASRIP and the Asia Pacific Legal Institute. Understanding the trademark law doctrine of foreign equivalents can feel much like an English-language speaker attempting to decipher an article in Welsh: mind-numbing, frustrating, and confounding. This article aspires to be none of those. This article will begin by showing how the doctrine works in the United States, both in litigation and in proceedings at the United States Patent and Trademark Office (USPTO), with plenty of examples. Then it will dig into the fundamentals of each element,

pausing occasionally to wrestle with the doctrine's assumptions, flaws, and inconsistencies. And it will provide a handy checklist of exceptions that prevent the doctrine from being applied. This monograph contains a selection of over 250 propositions which are equivalent to AC. The first part on set forms has sections on the well-ordering theorem, variants of AC, the law of the trichotomy, maximal principles, statements related to the axiom of foundation, forms from algebra, cardinal number theory, and a final section of forms from topology, analysis and logic. The second part deals with the axiom of choice for classes - well-ordering theorem, choice and maximal principles. The book *Function-oriented bioengineered skin equivalents - continuous development towards complete skin replication* aims to provide potential readers with a comprehensive summary of the available information on various in vitro skin models, from historical background to different modeling

approaches and their applications. Particular emphasis is placed on presenting the current technological components available for the development of engineered skin equivalents by summarizing advances in cell cultivation, materials science, and bioengineering. Using examples of the current-state-of-art, we describe the advantages, limitations, and challenges of developing in vitro skin models for successful use in clinical applications and skin-related research. This lesson integrates academic vocabulary instruction into content-area lessons. Two easy-to-implement strategies for teaching academic vocabulary are integrated within the step-by-step, standards-based mathematics lesson. **FINALIST FOR THE NATIONAL BOOK CRITICS CIRCLE AWARD** In 1960, Harvard's sister college, Radcliffe, announced the founding of an Institute for Independent Study, a "messy experiment" in women's education that offered paid fellowships to those with a PhD or "the equivalent" in artistic achievement. Five of the

women who received fellowships—poets Anne Sexton and Maxine Kumin, painter Barbara Swan, sculptor Marianna Pineda, and writer Tillie Olsen—quickly formed deep bonds with one another that would inspire and sustain their most ambitious work. They called themselves “the Equivalents.” Drawing from notebooks, letters, recordings, journals, poetry, and prose, Maggie Doherty weaves a moving narrative of friendship and ambition, art and activism, love and heartbreak, and shows how the institute spoke to the condition of women on the cusp of liberation. “Rich and powerful. . . . A love story about art and female friendship.” —Harper’s Magazine “Reads like a novel, and an intense one at that. . . . The Equivalents is an observant, thoughtful and energetic account.” —Margaret Atwood, *The Globe and Mail* (Toronto) This second volume of two presents analytic equivalents to the Riemann hypothesis. Includes an extensive set of appendices. Cases decided in the United States district courts, United States

Court of International Trade, and rulings of the Judicial Panel on Multidistrict Litigation. This latest edition incorporates the many changes in the specifications and designations of nonferrous alloys that have occurred over the past five years. The volume features over 20,000 alloy designations, including a complete listing of UNS designations for nonferrous alloys and comprehensive treatment of current European and Japanese standards. It covers more countries, more alloys, and more standards than previous editions, while keeping obsolete designations for those persons trying to duplicate equipment from old documents. This comprehensive volume is well-indexed with easy-to-use cross references that make short work of looking up equivalents for a material specification or designation. It provides valuable composition tables that allow you to compare similar alloys. Tensile properties and product forms are provided when available. Provides each kind of problem that might appear on an

examination, and includes detailed solutions.
