**Clinical Cases in Uveitis E-Book** Aug 01 2021  
Intraocular inflammation is particularly difficult  
to diagnose and treat, often resembling a  
complex puzzle of patient history, symptoms,  
imaging, and laboratory test results. Clinical  
Cases in Uveitis: Differential Diagnosis and  
Management is a unique, case-based resource  
designed to help you navigate the range of

challenging manifestations and presentations  
that often mimic other diseases. More than 90  
real-world uveitis cases are presented in a highly  
templated, easy-to-follow format, along with  
step-by-step guidance on the right patient  
questions, assessment, differential diagnosis,  
testing, management, and follow-up care.  
Provides a variety of patient presentations and  
scenarios and unique clinical situations that  
mirror day-to-day practice. Covers current  
diagnostic imaging modalities, including optical  
coherence tomography (OCT), optical coherence  
tomography angiography, fluorescein  
angiography (FA), and indocyanine green  
angiography (ICG). Features diagnostic and  
management algorithms that assist in  
differential diagnosis and decision making for  
even the most complex cases, including those in  
which the patient does not improve as expected,  
prompting a reassessment of diagnosis and  
management. Contains approximately 250 high-  
quality images, including color anterior segment

photographs, color fundus photographs, OCT images, and angiograms. Discusses distinguishing infectious from non-infectious inflammation; when and how to start systemic immunosuppressive therapy; diagnostic criteria and management of “white dot syndromes ; pediatric uveitis; masquerade syndromes, including inherited retinal degenerations, malignancies, and paraneoplastic syndromes; and much more. Includes the authors’ specific thought processes and approach in particularly challenging cases. An excellent resource and study tool for ophthalmology residents and fellows, those studying for oral boards, general ophthalmologists, retina specialists, and more. Clinical Cases in Skin of Color Jan 14 2020 This book identifies the most common presentations and essential features of top dermatological conditions in patients with skin of color. It presents practical information in a case-based organization to assist dermatologists in clinical decision making, and discusses important

cultural beliefs that must be considered in order to provide optimal care to patients with skin of color. There is an increasing demand for dermatologic treatments in patients with skin of color, as well as an accompanying need for education and training in this quickly expanding market. Skin of color is a key topic within dermatology as specific conditions can be harder to diagnose effectively in darker skin, and patients’ treatment can be compromised by this. Clinical Cases in Skin of Color: Medical, Oncological and Hair Disorders, and Cosmetic Dermatology is a concise resource with practical guidance for board certified dermatologists and dermatologists in training. Neuroanatomy Through Clinical Cases Jan 18 2023 "The third edition of Neuroanatomy through Clinical Cases is written for first- or second-year medical students enrolled in a basic neuroanatomy, neurobiology, or neuroscience course. It is also a valuable resource for advanced medical students and residents, as

well as students of other health professions ranging from physical therapy to dentistry. This book brings a pioneering interactive approach to the teaching of neuroanatomy and comprises 19 chapters that explain the major neuroanatomical systems. Each chapter first presents background material-including an overview of relevant neuroanatomical structures and pathways-and a brief discussion of related clinical disorders. The second half of each chapter is devoted to clinical cases. The cases begin with a narrative of how the patient developed symptoms and what deficits were found on neurological examination. A series of questions challenges the reader to deduce the neuroanatomical location of the patient's lesion and the diagnosis. Discussion and answers follow, revealing the actual outcome. This third edition is fully updated with the latest advances in the field and includes several new cases and enhanced online and digital components"--

Neuroanatomy Through Clinical Cases 2nd Edition Nov 23 2020

Neuroimaging of Covid-19. First Insights based on Clinical Cases Jun 18 2020 This book presents the variability of the effects of Covid-19 on the nervous system (NS), with the purpose to update content and images based on improved scientific evidence. Current available data show that involvement of the NS is frequent in patients with SARS-CoV-2 infection. The most common neurologic syndromes include cerebrovascular disorders, encephalopathies, inflammatory Central Nervous System (CNS) syndromes, peripheral neurologic disorders, psychiatric disorders. The pathophysiology of neurological manifestations is far from being understood. They can be coincidental, common complications of severe viral infection, or direct consequence of the viral infection either via

indirect para-infective mechanisms or direct viral penetration of NS. Experimental animal models had previously demonstrated the neuroinvasive potential of SARS-CoV and the detection of viral particles in special structures such as the thalamus, nucleus ambiguus and nucleus of the solitary tract, suggesting that CNS invasion can contribute significantly to the severe outcome not only through direct damage to neurological structures, but also through a potential detrimental effect on cardiorespiratory responses. Up to now, the detection of SARS-CoV-2 RNA in the cerebrospinal fluid of COVID-19 patients has been reported occasionally and conclusive pathological demonstration of the virus in the CNS is lacking. In this scenario, the role of neuroimaging is fundamental. These considerations highlight the urgent need to better clarify the neurotropic potential of the SARS-CoV-2 virus, and to verify on human autoptic tissue the mechanisms demonstrated in the experimental animal model

in order to develop potential strategies to prevent CNS invasion and to adapt treatment protocols based on neurological involvement. CT scan is useful to detect large hemorrhage and ischemic lesions, that have been reported in Covid-19 patients, but lacks identifying other possible neurological complications, such as microhemorrhage or encephalitis. MRI could overcome these limitations; in particular the use of specific sequences may reveal microvascular lesions that can occur during the disease course, according to the described pathogenesis. This book will be an invaluable tool for neuroradiologists, radiologists, neurologists, and all physicians involved in the pandemic.

**Neuroanatomy Through Clinical Cases with Silvius 4 Online (2-Year Subscription)** Nov 16 2022 Note: Printed book includes a 2-year

subscription to the Interactive eBook. Neuroanatomy through Clinical Cases brings a pioneering interactive approach to the teaching of neuroanatomy, using over 100 actual clinical

cases and high-quality radiologic images to bring the subject to life. The Second Edition is fully updated with the latest advances in the field, and includes several exciting new cases. This approach allows students to appreciate the clinical relevance of structural details as they are being learned, and to integrate knowledge of disparate functional systems, since a single lesion may affect several different neural structures and pathways. Most of the book comprises chapters that explain the major neuroanatomical systems. Each chapter first presents background material including an overview of relevant neuroanatomical structures and pathways, and a brief discussion of related clinical disorders. The second half of each chapter is devoted to clinical cases. The cases begin with a narrative of how the patient developed symptoms, and what deficits were found upon neurological examination. Boldface type highlights important symptoms and signs. A series of questions challenges the reader to

deduce the neuroanatomical location of the patient's lesion, and the diagnosis. Discussion and answers follow, and an epilogue reveals the actual outcome. One of the book's most innovative features is the inclusion of CT and MRI scans that depict each patient's lesion. These radiographs help the reader develop skills in interpreting the same kinds of diagnostic images employed in clinical practice. The book is intended primarily for first- or second-year medical students enrolled in a basic neuroanatomy, neurobiology or neuroscience course. It is also a valuable resource for advanced medical students and residents, as well as students of other health professions, including neuropsychology, physical therapy, occupational therapy, nursing, *Long Cases in Clinical Medicine* Oct 03 2021 Presents trainees with detailed clinical cases for numerous diseases and disorders covering various body systems including respiratory, gastroenterology, neurology and haematology.

Questions and answers are provided at the end of each case.

Clinical Cases in Melanoma May 30 2021 This book provides a guide to the diagnosis and management of melanoma. Clinical cases are examined to give the reader an understanding of new diagnostic tools including total body photofinders, two photon excitation fluorescence microscopy and confocal microscopy. Each case is presented in relation to immunotherapy and quality of life and examines the therapeutic outcomes of newly introduced therapies. Clinical Cases in Melanoma highlights evidence-based best practice through a multidisciplinary approach that is relevant to dermatologists, as well as oncologists, pharmacologists and pathologists.

dentistry, encompassing diagnosis, surgical site preparation and placement, restoration, and maintenance of dental implants. Unique case-based format supports problem-based learning Promotes independent learning through self-assessment and critical thinking Highly illustrated with full-color clinical cases Covers all essential topics within implant dentistry Neuroanatomy Feb 07 2022 The aim of this work is to offer the maximum of useful information to provide structural and functional insights into the human nervous system. The book recognizes the importance of understanding the relationship of the blood supply to the central nervous system (CNS) and the significance of integrating anatomy with clinical information and examples. The goal is to make it obvious that structure and function in the CNS are integrated elements, not separate entities. **PACES for the MRCP** Jul 12 2022 The 3rd edition of PACES for the MRCP has been fully revised and updated throughout to retain its pole position as the textbook to accompany core medical training (CMT) and prepare candidates for success in the Practical Assessment of Clinical Examination Skills and a future specialty career. Features Fully revised for the new Station 5 and completely updated throughout. Promotes understanding and deeper learning of modern medicine applicable to PACES and the specialist registrar. Emphasis on clinical assessment - history-taking, examination and communication skills - equipping candidates with appropriate differential diagnoses from which to develop the right diagnosis.

[hihomes.my](http://hihomes.my)

Encourages candidates to question why a diagnosis has arisen and consider its consequences. For example, 'Heart failure' is not a diagnosis until a candidate has considered the differential diagnoses of breathlessness and decided why heart failure is most likely, and then considered its cause (not always ischaemic heart disease), its presentation (acute, chronic, left or right ventricular or both) and, most importantly, the effects of it and its treatments on a patient's life. This 3rd edition of PACES for the MRCP continues to provide fully revised, up-to-date, evidence-based coverage of investigations and treatments. Whilst the emphasis of PACES is on clinical skills, candidates who understand when, for example, a patient with rheumatoid arthritis might benefit from a biologic agent and how this will influence inflammatory disease, is better equipped for success. A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised

into the 5 stations of the PACES exam - respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems Engaging question-and-answer approach at the end of each case - excellent preparation for the exam Boxed tips highlight vital information - helps identify what is most important to remember Produced in full colour throughout Colour coding for each station Many more illustrations added - now over 300 clinical photographs and line drawings in colour Many more cases added, bringing the number up to 250 - 50 per station History-taking and communication skills stations now revised so that they exactly mimic the requirements of the exam

Clinical Cases for Surgery Exams Jan 26 2021 Currently, clinical training for undergraduates is becoming more difficult. To be a good doctor with adequate training, one must be exposed to many different patients with a variety of pathologies and diseases. At present, we are unable to achieve this, mainly due to the increase in the medical student cohort each year and fewer in-patients. In short, the student-to-

patient ratio is worsening, thus lessening students' contact with patients and learning experience. Fortunately, with the objective structured clinical examination (OSCE) format, undergraduate and postgraduate teaching and examination have become more efficient. This book will be very useful for students preparing for surgical OSCEs by covering the different clinical scenarios that a certain condition might present, and allowing self-testing of the questions as well as learning from the provided answers.

100 Cases in Clinical Medicine Jun 30 2021 100 Cases in Clinical Medicine is an indispensable revision tool for medical students preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation

results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases.
