Sustaining the Carrier War Dec 28 2020 The ability of the United States Navy to fight and win a protracted war in the Pacific was not solely the result of technology, tactics, or leadership. Naval aviation maintenance played a major role in the U.S. victory over Japan in the second World War. The naval war against Japan did not achieve sustained success until enough aircraft technicians were available to support the high tempo of aviation operations that fast carrier task force doctrine demanded. When the United States realized war was imminent and ordered a drastic increase in the size of its aviation fleet, the Navy was forced to reconsider its earlier practices and develop new policies in maintenance, supply, and technical training. Not only did a shortage of technicians plague the Navy, but the scarcity of aviation supply and repair facilities in the Pacific soon caused panic in Washington. While the surface Navy's modernization of at-sea replenishment was beneficial, it did not solve the problems of sustaining war-time aircraft readiness levels sufficient to a winning a naval air war. Fisher outlines the drastic institutional changes that accompanied an increase in aviation maintenance personnel from fewer than 10,000 to nearly 250,000 bluejackets, the complete restructuring of the naval aviation technical educational system, and the development of a highly skilled labor force. The first comprehensive study on the importance of aircraft maintenance and the aircraft technician in the age of the aircraft carrier, *Sustaining the Carrier War*, provides the missing link to our understanding of Great Power conflict at sea.

Volume I: U.S. Navy, U.S. Marine Corps and U.S. Coast Guard Aircraft Lost During World War II - Listed by Ship Attached Jun 14 2022 During World War II, the U.S. military lost some 35,000 aircraft to enemy action, training incidents, typhoons, aircraft carrier deck mishaps, mechanical failures or just normal wear-and-tear where aircraft were scrapped and used for parts to keep others flying. Many just failed to return from their missions. To date, the 15,069 aircraft represented in this 3-volume set is information initially transferred from hand-written "Aircraft History Cards" and are the total number of U.S. Navy, Marine Corps and Coast Guard aircraft lost between 7 December 1941 and 15 August 1945, and lost outside the continental United States (CONUS). Volume I represents the information on any aircraft lost that was attached to the 197 different ships in the database. Given the thousands of hours that went into this effort, the author hopes that, as a 3-volume set of reference books, it provides assistance to others who are researching ship, squadron and aircraft histories.

Passenger Safety and Convenience Systems Jan 29 2021 Passenger Safety and Convenience Systems is made up of 61 technical papers and

articles written in the last decade covering a variety of electronic systems for driver and passenger safety and convenience. Many papers in this book could arguably be considered in both categories because they provide the driver/passenger with multiple functions of safety and convenience. Some examples include keyless entry, security systems, night vision, and more. This book concludes with a chapter on Future Development in Electronically Controlled Body and Safety Systems.

The Last Century of Sea Power, Volume 2 Oct 26 2020 "An important contribution . . . a thoughtful account of the years preceding the Second World War and, at much greater length, of the war itself." —History In this second volume of his history of naval power in the 20th century, H. P. Willmott follows the fortunes of the established seafaring nations of Europe along with two upstarts—the United States and Japan. Emerging from World War I in command of the seas, Great Britain saw its supremacy weakened through neglect and in the face of more committed rivals. Britain's grand Coronation Review of 1937 marked the apotheosis of a sea power slipping into decline. Meanwhile, Britain's rivals and soon-to-be enemies were embarking on significant naval building programs that would soon change the nature of war at sea in ways that neither they nor their rivals anticipated. By the end of a new world war, the United States had taken command of two oceans, having placed its industrial might behind technologies that further defined the arena of naval power above and below the waves, where stealth and the ability to strike at great distance would soon rewrite the rules of war and of peace. This splendid volume further enhances Willmott's stature as the dean of naval historians. Praise for The Last Century of Sea Power series "The author, dean of naval historians, provides a sweeping look at, and analysis of, the transformation of naval power . . . Willmott is fearless in his judgments." —Seapower "H. P. Willmott is the finest naval historian and among the finest historians of any discipline writing today." —Bernard D. Cole, author of *The Great Wall at Sea*

Fifteenth Air Force against the Axis Dec 16 2019 In *Fifteenth Air Force against the Axis: Combat Missions over Europe during World War II*, historian Kevin A. Mahoney provides a detailed combat history of the crucial role played by this air force from November 1943 through May 1945. Presented by month in chronological order, Mahoney describes all the major bombing and fighter missions carried out by this air force within a strategic context. Each chapter includes an introduction describing developments in the evolution of the strategic air campaign against the Germans, highlights the purpose and importance of the month's operations, and reviews the Luftwaffe's resistance and changes in tactics and important developments in the Fifteenth Air Force's organization. Each monthly narrative further explores most missions, detailing the number of aircraft lost during these missions. Losses are based on an exhaustively researched database compiled by Mahoney that contains details of almost 3,000 aircraft. Target damage is mentioned, while enemy opposition is also described for each mission. Appendices include four short essays on bombing operations (planning and flying of missions, tactics and techniques, bomb types, and bombing accuracy), tactics employed by fighter escort in aerial combat and strafing, combat crews and their aircraft (including a comparison of American fighters and bombers, the training of the crews, and their combat tours), and the Fifteenth Air Force command structure (including the use of intelligence, photo and weather reconnaissance, and the considerable effect of weather on Fifteenth Air Force operations). This work of military history is ideal for students and scholars of the air war in Europe.
